

CSC4026Z Chat Server Documentation

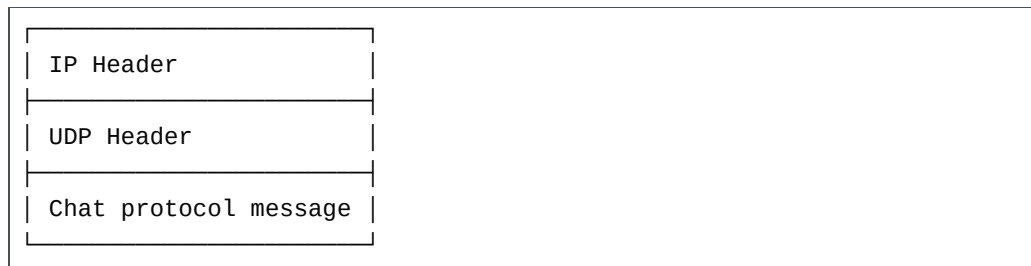

Network Protocol

The server's hostname is: `csc4026z.link`. The server permits two kinds of connections:

- UDP port 51820 — An encrypted endpoint
- UDP port 51821 — An [encrypted](#) endpoint which will require a valid `mac2`. Only implement this once you have a working client the connects to port 51820
- UDP port 51825 — A cleartext endpoint

Cleartext packet structure

The cleartext server expects [chat messages](#) to simply be placed in a UDP packet:

Wireguard packet structure

The Wireguard server expects [chat messages](#) to first be wrapped in a [Wireguard](#) transport message, then placed in a UDP packet:
